## Overview

Each business has unique requirements, and so Latitude allows you to customize its screens to better fit them. This can be done by changing field name labels, using 'spare' fields such as txtUserField1 to hold extra information that Latitude doesn't have predesignated fields for, and changing field appearance and behaviour.

Appearance changes include hiding a field by making it invisible. Behaviour changes include making a field required so that users can't leave it blank, or read-only so users can read and copy field content, but can't change it.

## How To Customize Fields

For detailed instructions read the 'How do I Customize Fields on Screens & Reports' section in the Latitude Online Manual ([www.LatiBiz.com/product-doc.html](http://www.LatiBiz.com/product-doc.html)).

If you prefer to read on paper, download the Latitude 'How To' Guide from ([www.LatiBiz.com/documentation.html](http://www.LatiBiz.com/documentation.html)) and print the sections you need.

## Client Screen

On Screen (Default Name)	Label Name	Field Name
Company Code	txtCompanyCode	Client Code
Company Name	txtCompanyName	Company Name
Date	txtClientDate	dteLastUpdated
Inactive	txtClientInactive	Inactive
Company	txtIsCompany	ynCompany
